You are invited to be part of a study about ASL and Balance. We want to know how deafness, balance, and ASL work together and affect spatial navigation skills.

You will be asked to take a few surveys, complete some balance tests and play our virtual reality video game (It could be interesting for you). This could last up to 3 hours. We will pay $15/hour.

You may be able to be a part of this if

- You are 18-40 years old,
- You are deaf or hearing,
- You use either ASL or Spoken English fluently, and
- You meet some of our medical history criteria.

To participate or learn more about this research, please contact the Vestibular and Balance Lab at balancelab@gallaudet.edu.

This research is conducted under the direction of Drs. Chizuko Tamaki and Kristen Maul
This project is approved by the Gallaudet University IRB (May 23rd of 2017)
